

**St. Luke's Hospital & Health Network**  
**Drug Screening Requirements**

A negative five (5) panel drug screen is required for all student interns, to be completed no sooner than 30 days prior to their start date. Students interested in future internship experiences should speak with their school's program director to inquire if the school has contracts already set up with drug screening organizations. The drug screening must come from a Health and Human Services approved/certified lab *and be a forensic study*. Results are to be kept on file with the school program director.

**The following are the drugs St. Luke's requires in the five panel drug screen:**

- Amphetamines
- Cocaine
- Cannabinoids
- Opiates - Includes morphine, codeine, hydromorphone, hydrocodone (all of these must be included)
- Phencyclidine (PCP)
